At Westfield Public Works, we work diligently to provide top quality water to every tap and ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

HERE ARE SOME COMMON HOUSEHOLD TIPS FOR PROTECTING OUR DRINKING WATER SUPPLY

- Reduce the amount of fertilizers, pesticides, or other hazardous chemicals that you use. Buy only what you need so that you don't have to dispose of leftovers. Read all the labels and follow directions.
- Use organic lawn and garden alternatives that do not contain synthetic chemical poisons. Reduce use of products that contain any of the following words on their labels: caution, warning, danger, poison, flammable, volatile, caustic, or corrosive.
- Recycle used oil, automotive fluids, batteries, and other products. Don't dispose of hazardous products in toilets, storm drains, wastewater systems, creeks, alleys, or the ground. This pollutes the water supply.
- Utilize the Hamilton County Household Hazardous Waste Center located at 1717 E. Pleasant Street in Noblesville.
 For more information call 317-776-4005.
- Conserve water indoors through lowflow showerheads, low-flush toilets, and washing only full loads in dishwashers and washing machines.

- Conserve water outdoors by planting native, drought-tolerant plants in your yard, reduce watering of lawns, and watering only in the morning, when evaporation rates are at their lowest.
- For more information on Wellhead Protection, contact Mr. Bruce Hauk at (317) 896-5452.
- To learn more about groundwater protection and other drinking water resources, contact the Indiana Department of Environmental Management at (317) 308-3388 or visit their website at www.in.gov/idem

NEED MORE INFORMATION

We want our valued customers to be informed about their water utility. If you have any questions about this report or concerning your water utility, please contact Jerry Cloud or Bruce Hauk at (317) 896-5452. If you want to learn more, you are welcome to attend any of our regularly scheduled Town Council meetings held at 7:00 PM on the 2nd Monday of every month.

Jerry Cloud, Water Production Supervisor

Bruce Hauk, Director of Public Works

Westfield Public Works 2706 E. 171st Street Westfield, Indiana 46074 Phone: 317-896-5452 Fax: 317-867-0202

Annual Drinking Water Quality Report

Westfield, Indiana

Westfield Public Works
North Well Field

The Town of Westfield proudly presents this year's Annual Drinking Water Quality Report. This report is designed to keep you informed about the quality of your drinking water over the past year. We are pleased to report that our drinking water is safe and meets all federal and state requirements.

Westfield's drinking water is supplied by groundwater that comes from two sources. The primary source is two well fields located within our community that are owned and operated by Westfield Public Works. Together, these community well fields consist of four pumping wells that produce groundwater from various sand and gravel aquifers. The second source of drinking water for Westfield is supplied by Harbor Water Corporation.

In response to the Federal Clean Water Act, the Town of Westfield has completed Phase I of their Wellhead Protection Plan. This plan was enacted to protect the Town of Westfield's groundwater from specific land uses and activities that are proposed to occur in areas adjacent to public well systems. The focus of this prevention plan is a means to protect the community's (customers') drinking water quality.

Sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at (800) 426-4791.

Infants and children who drink water containing lead in excess of the action level could experience delays in their physical or mental development. Children could show slight deficits in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants such as salts and metals which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, stormwater runoff, and residential uses.
- Organic chemicals, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production and can also come from gas stations, urban stormwater runoff, and septic systems.
- Radioactive materials, which can be naturally occurring or be the result of oil and gas production and mining activities.

AVERAGE WATER QUALITY DATA FOR 2002 *Table revised for clarification 7/8/03

Name of Constituent	Violation Yes/No	Maximum Level Detected	Range of Levels De- tected	Unit Measure- ment	MCLG	MCL	Likely Source of Constituent
Inorganic Compounds							
Barium	No	0.02	0.01 to 0.02	PPM	2	2	Erosion of natural deposits.
Copper	No	0.94 (1)	.03 to 1.47 ⁽¹⁾	PPM	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits.
Fluoride	No	0.8	0.8 to 0.8	PPM	4	4	Additive used to promote strong teeth.
Lead ⁽²⁾	No ⁽²⁾	5 ⁽¹⁾	1 to 46 ⁽¹⁾	PPB	0	AL=15	Corrosion of household plumbing systems; erosion of natural deposits.
Nitrate	No	0.6	0.4 to 0.6	PPM	10	10	Runoff from fertilizer use; septic system leachate; erosion of natural deposits.
Sodium	No	21	16.5 to 21	PPM	N/A	N/A	Erosion of natural deposits, urban runoff.
Volatile Organic Compounds							
Bromodichloro- methane	No	5.7	ND to 5.7	PPB	N/A	N/A	By-product of drinking water chlorination.
Bromoform	No	0.9	ND to 0.9	PPB	N/A	N/A	By-product of drinking water chlorination.
Chlorodi- bromomethane	No	3.8	ND to 3.8	PPB	N/A	N/A	By-product of drinking water chlorination.
Chloroform	No	5.5	0.5 to 5.5	PPB	N/A	N/A	By-product of drinking water chlorination.

Table Notes

- (1) Levels detected for copper and lead represent the 90th percentile value as calculated from a total of 20 samples each.
- (2) One sampling site exceeded the action level for lead. This was not a water quality violation

All constituents were sampled in 2002.

Included in the table, you will find terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

DEFINITIONS

Not Applicable (N/A) – no MCLG or MCL has been established for these unregulated constituents.

Parts per million (PPM) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (PPB) - one part per billion corresponds to one minute in two thousand years or a single penny in \$10,000,000.

Not Detected (ND) - constituent was not detected in a sample.

Action Level (AL) - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.
